GRIDWATER FACTSHEET

Ford Field’s year of gridwater: the water consumed at the power plants to generate the electricity the building used, attributed to the basins it left, hour by hour, and valued at Detroit’s water rate.

Every figure on these two sheets is the sum of the building’s sealed hourly records, and each record recomputes.

Electricity: MODELED, the building’s published floor area, 1,826,250 sq ft, times 14.9 kWh per sq ft a year (EIA, 2018 Commercial Buildings Energy Consumption Survey, Table C22, public assembly, 75th percentile), spread flat. Gridwater: REAL, each hour’s sealed MISO-Central record (EIA-930 hourly mix; EIA-860 and EIA-923 cooling data, 2024, table fwb-eia860-923-2024-r2; basin shares bs-eia860-923-2024-r3). Price: the water volume charge as the Detroit Water and Sewerage Department prints it, Tier 2, in force on the hour’s date, with no sewer, fixed, or stormwater charge (water-rates-r3). Ceilings: the embedded-water prescription in force, version 1, 2026-09-21. Standard 0.7.

METHOD

1. Each hour’s electricity: the megawatt-hours of the building or the planned load.
2. Gridwater: the megawatt-hours times the hour’s sealed gallons per megawatt-hour, by basin group.
3. Price: the gallons in the schedule’s unit, valued at the rate as printed, in force on the hour’s local date.
4. Percent of prescription: a group’s gallons per megawatt-hour over its ceiling; the year’s figure is load-weighted.

LABELS

- REAL** A figure read from a sealed record or a filed document.
- MODELED** A figure built from published figures under one rule applied to every site alike.
- Seal** The SHA-256 of the record’s canonical form, which aquadrio.com/record recomputes.
